

❄️ PROTECT YOUR BACKFLOW PREVENTER THIS WINTER! ❄️

This is for any customer that has the following: irrigation/agriculture meter and or a commercial meter, you will have a backflow preventer with a box.

A Little Preparation Now Can Prevent Costly Repairs Later!

As colder weather approaches, we want to remind all customers with backflow preventers to take a few simple steps to protect their equipment from freezing temperatures.

☒ CHECK YOUR BACKFLOW PREVENTER BOX

- Inspect your protective box or enclosure for cracks, holes, or other damage.
- Make sure the lid is secure and closes properly.
- Check that insulation is in good condition and properly positioned.
- Repair or replace damaged boxes before freezing weather arrives.

☒ WINTERIZE YOUR BACKFLOW PREVENTER

- Make sure your backflow preventer is adequately protected from freezing temperatures.
- Check for exposed pipes, leaks, or damaged insulation.
- Contact a qualified backflow professional to properly winterize your assembly, if needed.
- **Do not wait until freezing temperatures are in the forecast!**

WHY IS THIS IMPORTANT?

Freezing temperatures can cause backflow preventers and connecting pipes to crack or burst, resulting in expensive repairs, water leaks, and interruptions in water service.

REMEMBER: Protect Your Backflow Preventer — Before the Freeze!

Taking a few minutes to inspect your equipment today could save you time, money, and frustration this winter.

Thank you for helping protect your water system!
